

**Abstract**

A coaxial cable with a Plug comprises a coaxial cable (1) in which an outer conductor (103) is provided around a center conductor (101) with an insulator (102) interposed therebetween and a plug (2) having a center contact (201) electrically connected to the center conductor (101) via a center conductor connecting member (203) and an outer contact (202) electrically connected to the outer conductor (103) via an outer conductor connecting member (204). The center contact (201) and the outer contact (202) rotate about an axis (RX) perpendicular to the axis (201X) of the center contact while maintaining the electrical connection between the center contact (201) and the center conductor (101) and the electrical connection between the outer contact (202) and the outer conductor (103).
